

## Matting Purchased versus Rented

The right matting is about soil control; 90% of the soil that enters a building is tracked through the doors and a good matting system can trap 80% of that soil. Lower cleaning cost and a safer indoor environment depends on the effectiveness of the mats.

Rental Mats
Provide a limited range of sizes and colours
Are usually only wiper mats, the least effective type.
Have limited soil capacity, to minimize processing time for the rental company
Require a rigid contact that's difficult to get out of
Can bunch up or wrinkle with age
Are an ongoing cost that far exceeds the worth of the product
Edge is usually just an extension of the backing and can fail, creating a trip hazard
Dye lot's are not consistent with rental exchange programs
Staff clean rentals as part of their cleaning, you are paying twice for one job
Weekly transport and laundering has a huge environmental impact

Purchased Mats
Can be custom made to fit any application
Come in a variety of types and styles for any application
Hold more soil and moisture, keeping your facility cleaner
Come with a warranty
Can have stronger, anti slip backings and accessories to keep people safe.
Pay for themselves in a few months and provide years of effectiveness
Keep people safe with heavy duty reducer edges
Are available in many consistent colours, to coordinate to your facility
Make building maintenance easier by trapping more soil and moisture
Onsite vacuuming and extraction uses a fraction of the water & power

**PURCHASING MATS IS A BETTER OPTION FOR YOU AND THE PLANET**
